About This List

This list is based on observations of moths in Plainsboro, New Jersey. Most observations date from late August 2006 to the present, and most are supported by photographs. The list is arranged in Hodges number order, and most common names follow either Beadle and Leckie's (2012) or Covell's (1984) Peterson field guides to moths; other common names are taken from the Moth Photographers Group website (if the site gives a common name). An "X" in a column indicates that an adult of the species has been recorded in that month. As of this edition, at least 344 species of moths have been recorded in Plainsboro and listed here. There are certainly other species that occur in Plainsboro but are not included here; this list should be considered a beginning, not the last word.

A second list gives occurrence information for species pairs or complexes that are difficult or impossible for the amateur to assign to species.

As new observations accumulate and older photos are identified, this list will be revised and updated.
